

eDocBuilder Updates for 2018

(items bolded were demonstrated in the webinar)

New Features in eDoc Admin

- Imposition: Account for VDP Cut & Stack Imposition when production file is broken into multiple files - Option to have files be sequential.
- **Display Pressero's Custom Profile Field Attributes in list of Profile Field Options.**
- **Support for Canvas Products:**
 - Wrap
 - Solid Color
 - CMYK, RGB or Spot
 - Mirroring
- **Create Templates from Scratch. No need to upload PDF or import from InDesign.**
- **Add Choice of Forms or Interactive Template when creating a new template.**
- Add Custom Security Settings to the Admin login screen.
- Allow different color background options per page.
- Add integration with Pixabay.
- Change eDocBuilder's cookies to be secured.
- Allow Pressero DAM to be overridden at template level and pass along all fields (and values) in URL.
- Log changes to graphic files linked to templates from the Image Library.
- Enforce HTTPS in the support login page.
- **Add ability to import response sets from excel file.**
- **Add Online Support Chat.**

New Features for Creating Templates in both Field Setup and Field Designer

- **Add RGB & CMYK Color Picker with the option to indicate Spot Color to:**
 - Barcode Fields
 - Text Fields
 - Font Effect Outline and Shadow
 - Text Color in Font Effect fields
 - Fill Color on Text Fields
 - Font Outline on Text Fields
 - Border Color on Image Fields
 - Text Color on Text Fields
- **Add Shapes**
 - Allow shapes to be filled with color and/or images
 - Add Outline to Shapes
- When rotating a text or image field, select to rotate from center or left bottom corner.

New Features and Functionality added to the Field Designer.

The Field Designer is a new Feature we have been working on over this past year. It is an alternative to our Field Setup area of admin that allows you to create and edit your templates interactively. We will continue to add all the functionality that is currently available to the Field Setup area to the Field Designer and will complete that transition in the new year.

- Support For:
 - Text Fields
 - Image Fields
 - Text Overflow

- Barcodes
- Non-Printable Fields
 - Allow assignment of a Graphic file to a non-printable area.
- Force-Fit
- Text Reformat
- Repeat Fields
- Text Block Alignment (None, Left, Center, Right).
- Field Rules
- Profile Fields
- Protect Fields
- Stacking Order
- Display all Fields in a Field View.
- Display and edit how the fields will look to the end user in a Form View.
 - Rearrange fields (prompt order).
 - Create, Edit, Manage Entry Blocks.
 - Rearrange fields (of, into, and out-of) Entry Blocks.
 - Set custom width of fields.
- **Support for selection of multiple fields by keyboard shortcut or by selection box at field. With multiple fields selected, you can:**
 - Align
 - Distribute
 - Resize
 - Delete
 - Move
 - Rotate
 - Duplicate
- Save changes made in the Field Designer to the Master PDF.
- Copy/Paste from one field to another:
 - Settings
 - Rules
 - Position
- Enable Copy/Paste and Cut/Paste of Fields.
- Ability to add new text and image fields to the template being created.
 - Ask for Field Prompt, Field Name and Tooltip when creating new field
 - Protect against duplicate field names - especially case insensitivity
- Add "Full Screen" mode to the top navigation area
- Add Character Counter.
- Set a Maximum Length for text fields.
- Set allow upload from assets and Initial asset category for image fields.
- Use the selected unit throughout the Field Designer.
- Upload Graphic Files directly from the Field Designer and save as part of the template assets.

New Features for Customizing Templates

- **Both Interactive and Form Templates**
 - **Offer “PDF Proof” taking into account the bleed settings and reducing the size of the document. Previously only had PDF Preview which included the bleed.**
 - **Image Quality Feedback given on Form Based templates. Previously only available on Interactive Templates.**
 - **Allow user to fill a field with a color.**

- Activate the "Cell Phone" Profile field type in eDocBuilder to pull from Pressero
- **Interactive Designer**
 - **Support for selection of multiple fields. With multiple fields selected, you can:**
 - Align
 - Distribute
 - Resize
 - Delete
 - Move
 - Rotate
 - Duplicate
 - View Fields in Entry Blocks (previously only available in Form Templates).
 - **Add option for a Font Outline.**
 - Add window resize icon to page area for Interactive designer templates.
 - **Add Shapes.**
 - Allow rotate image inside the image crop window.
- **Form Templates**
 - Allow preview of more than 5 records in a VDP upload (now 100).
 - **Added Image Quality Feedback (previously only available to Interactive Templates).**
 - Limit VDP to desktop upload only (disable assets).
 - Limit upload to assets only (previously always allowed customer to upload an image).
 - Add "Replace" button to advanced image uploader when "Allow upload from assets only" is enabled.

UI & UX updates

- Add tooltip to "delete" garbage icon in 5id client.
- Move the delete button in the Interactive Designer to the top of the page.
- Change cut-paste field from 2-step to single step operation.
- Change selection behavior of a field to be more user friendly.
- Allow default text to be added by double clicking on text field.
- Add help text for barcode fields default value about the format expected from the barcode rendering type.
- Have footer area open by default in designer.
- Add drag/drop language to new template details.
- Eliminate "Create New" button when creating a template from scratch.
- Add a load icon when user selects a font effect.
- Auto Expand the current page after selecting the Fields area.
- Update highlight field UX on redo-undo.
- Highlight panels when applying a redo or undo action in the FD.
- Increase visibility of the loading icon in the FD.
- Address confusion of grayed out button for "Finished Editing."
- Add Lazy Loading to eDocBuilder to decrease the time it takes to load images and fonts in admin.
- Template Assets > Fonts. Add check all or uncheck all to Font Library option.

API and iFrame Updates

- Add 'adccss' or "additional css" option for eDoc frame customization.
- HP Designer Integration - Add preview to bottom.
- Add endpoint *getSessionLastModified* that returns a DateTime.
